

Report of Examination of Alaska Salmon Stream.

Pybus Bay. North Inlet Stream.

Date Examined. Throughout season.

Location Right hand Arm of Pybus Bay.

Approximate length. Over five miles (up to August 12 no salmon had penetrated more than 2 miles up stream.) Width 22 feet Depth 10 in.

Condition and stage. Normal July 1st to 12th. Above normal July 12 to 22nd. Normal July 22nd to 29th. Below normal July 29-August 13th. Quite low latter part of period.

Salmon run. Very light.

Date and duration of run, etc. "Dogs" started about July 14th and a few fish still coming August 13th. "Humpies" (a few) showed up Aug. 13th in lower pools.

Estimated number of each kind, etc. Dogs 2,000. Humpies 20.

Former size of runs. Informed that normal run of all kinds is about 20,000.

Natural barriers. Clear stream.

Markers. One on each side of Inlet about 500 yards from mouth of stream and plainly visible.

James J. Lewis, (signed)

Stream Watchman.
